

# **Portfolio Website 2025 - Reflection**

## **Project Objectives**

The main goal of this website is to create a professional portfolio that can help me get a job in front-end development.

## **Issues Found in Previous Versions**

- Many errors in the code
- Mobile dropdown menu was not beautiful or functional
- Color scheme did not reflect professionalism
- Poor responsive design

## **What Has Been Improved**

- Redesigned the navigation menu to look good on both mobile and desktop
- Added easy-to-access dropdowns for project categories
- Created separate pages for each project to make browsing easier
- Chose a cleaner and more professional color palette
- Improved layout responsiveness using Tailwind CSS

## **Personal Feelings**

I feel more confident and professional after completing the improvements. The updated design better represents my skills and is more suitable for job applications.

## **Portfolio 1 (Old Version)**
